

# FITBUDDY

## Brainstorming and Ideation Phase

**Project Type:** AI-powered fitness and wellness assistant

### 1. Problem Identification

Many people want to improve their fitness but find it difficult to maintain a consistent routine. Common challenges include lack of personalized guidance, difficulty tracking progress, unclear workout choices, and limited motivation. FitBuddy is proposed as a simple digital fitness companion that can provide personalized support based on a user's goals and preferences.

### 2. Brainstorming Objective

The main objective of the brainstorming phase is to identify useful, practical, and user-friendly features for FitBuddy. The ideas focus on personalization, workout assistance, progress tracking, motivation, and AI-based interaction.

### 3. Initial Ideas Generated

| Area              | Brainstormed Idea                                                                       |
|-------------------|-----------------------------------------------------------------------------------------|
| User Profile      | Collect basic fitness goals, preferences, experience level, and available workout time. |
| AI Assistant      | Allow users to ask fitness-related questions and receive helpful responses.             |
| Workout Plans     | Generate workout suggestions according to the user's selected goal and level.           |
| Exercise Guidance | Provide exercise descriptions, steps, and basic safety reminders.                       |
| Progress Tracking | Record workouts and show progress over time.                                            |
| Goal Setting      | Allow users to create fitness goals and monitor completion.                             |
| Motivation        | Provide reminders, encouragement, and achievement messages.                             |
| Dashboard         | Show important fitness information in a simple and clear interface.                     |

## 4. Target Users

- Beginners who need simple guidance to start exercising.
- Students and busy users who need short and manageable workout routines.
- Users who want to monitor their workout consistency and progress.
- People looking for an interactive AI-based fitness companion.

## 5. Proposed Core Features

- Personalized user profile
- AI fitness chatbot/assistant
- Goal-based workout recommendations
- Exercise information and instructions
- Workout and progress tracking
- Fitness goals and achievements
- Simple dashboard
- Motivational reminders

## 6. Ideation Process

| Step          | Description                                                                            |
|---------------|----------------------------------------------------------------------------------------|
| 1. Understand | Identify common fitness problems and user needs.                                       |
| 2. Brainstorm | Generate multiple possible features and solutions without immediately rejecting ideas. |
| 3. Group      | Organize similar ideas into categories such as AI, workouts, tracking, and motivation. |
| 4. Select     | Choose ideas that are useful, feasible, and suitable for the project scope.            |
| 5. Define     | Convert selected ideas into clear project features and requirements.                   |
| 6. Prototype  | Plan the screens, user flow, and technical implementation.                             |

## 7. Selected Concept

**FitBuddy** will be developed as an AI-assisted fitness companion. The concept combines personalized workout guidance, an AI assistant, goal management, and progress tracking in one simple application. The design should be easy for beginners to understand and use.

## 8. Expected Outcome of the Ideation Phase

At the end of the brainstorming and ideation phase, the project team should have a clear understanding of the target users, their main problems, the proposed FitBuddy solution, the core features, and the basic user flow. These outcomes can be used as the foundation for the next stages: UI/UX design, development, AI integration, testing, and deployment.

## **9. Summary**

The brainstorming and ideation phase transforms the general idea of a fitness application into a defined FitBuddy concept. By focusing on user needs and practical AI-supported features, the project can move forward with a clear and structured development plan.
