

PROJECT PLANNING PHASE

FITBUDDY

A Smart Fitness and Wellness Management Application

Project Name	FitBuddy
Project Phase	Project Planning Phase
Project Type	Fitness & Wellness Application
Document Purpose	Planning and defining the project before development

1. Introduction

FitBuddy is a proposed fitness and wellness application designed to help users maintain healthy daily habits. The application can provide workout guidance, activity tracking, basic nutrition support, progress monitoring, and reminders in one convenient platform.

2. Problem Statement

Many people find it difficult to maintain a consistent fitness routine because of busy schedules, lack of guidance, and difficulty tracking progress. FitBuddy aims to provide a simple and organized digital solution that helps users plan and monitor their fitness activities.

3. Project Objectives

The main objectives of FitBuddy are:

- Provide simple and accessible fitness planning tools.
- Help users track daily activities and progress.
- Support consistent workout and wellness habits.
- Present fitness information in an organized manner.
- Create a user-friendly and responsive application.

4. Project Scope

The project focuses on features that support everyday fitness and wellness management. The initial scope includes user registration, profile management, workout planning, activity tracking, progress monitoring, reminders, and basic wellness information.

5. Target Users

FitBuddy is intended for students, beginners, working users, and other people who want a simple way to organize their everyday fitness activities.

6. Functional Requirements

The system should provide the following functions:

- User registration and login.
- Personal profile creation and management.
- Workout plan creation and viewing.
- Daily activity tracking.
- Progress history and basic reports.
- Reminders for planned activities.
- Basic nutrition and wellness information.

7. Non-Functional Requirements

The application should be easy to use, responsive, reliable, secure, and capable of protecting user information. The interface should be simple enough for beginners and the system should provide reasonable performance during normal use.

8. Proposed Technologies

The exact technology stack can be finalized during the design phase. A suitable implementation may include a mobile or web front end, a backend service, a database, and authentication services.

9. Project Timeline

A simple development plan is shown below.

10. Expected Outcome

The expected outcome is a functional FitBuddy application that allows users to organize fitness activities, record progress, and maintain healthy routines through a simple digital interface.

11. Conclusion

The planning phase establishes the goals, scope, users, requirements, technologies, and schedule for FitBuddy. A clear plan will help the development team proceed systematically into the design, implementation, testing, and deployment phases.

Phase	Main Activities	Duration
Planning	Requirements, scope, objectives	Week 1
Design	UI/UX and system design	Week 2
Development	Frontend, backend, database	Weeks 3–5
Testing	Functional and usability testing	Week 6
Deployment	Final setup and documentation	Week 7
